This course should enable you to achieve the following:

- Describe architecture and architecture models, such as functional or operational.
- Understand how to elicit, analyze and select architecturally significant requirements.
- Define and classify nonfunctional requirements and explain how to architect for them.
- Explain an Architecture Overview and its relationship with the Component and Operational Models.
- Define architecture decisions, for example, use Salesforce as a CRM package.
- Apply architectural principles, for example, buy before build
- Identify the functional aspects of an IT architecture and some key design principles used in building Component Models, such as loose coupling and strong cohesion
- Explain the approach, steps and artifacts used to define an Operational Model (e.g. Location Model, Node Model, Deployment Model, etc.).
- Describe technical reviews and how to incorporate full life cycle validation and verification into architectural thinking
- Understand how architects operate within agile teams and how agile frameworks and approaches affect architectural styles.

What are the course prerequisites?

Before beginning this course, you should have completed the following prerequisites:

- Review case study background

[Case Study Background](#)

on which the in-class exercises are based.

- Read an Introduction to the IBM Views and Viewpoints Framework for IT Systems

[Views and Viewpoints](#)

The instructors for this class

Instructor	Title/Division/Email

Let us take a few minutes to meet each other

Please introduce yourself by giving us the following details about yourself:

- Your name
- Your current role
- Your experience in IT
- Your experience on the job
- Your areas of specialization
- What you expect to get from this class

- Please turn mobile phones off
- Facilities
- In case of fire
- Prompt start, please
- Estimated finish times
- Lunch time
- There will be morning and afternoon breaks

Architectural thinking involves inputs, processes, and outputs (1 of 2)

Architectural thinking involves inputs, processes, and outputs (2 of 2)

Architectural thinking is iterative and complex

What architectural thinking involves

- Learning a variety of architecture styles and approaches
- Avoiding the “golden hammer” anti-pattern
- Not rushing to a solution
- Understanding that fixing one problem often causes another
- Looking for unconventional solutions

Day 1

Architectural Thinking
Overview

What Is Architecture?

Requirements Aspect:
Functional

Lunch

Requirements Aspect:
Nonfunctional

Case Study Introduction

Exercise 1 and Review

Architectural Decisions
and Principles

Architecture Overview

Day 2

Review Day 1

Exercise 2 and Review

Functional Aspect

Exercise 3 and Review

Lunch

Operational Aspect
Part 1

Exercise 4 and Review

Day 3

Review Day 2

Operational Aspect
Part 2

Exercise 5 and Review

Validation and Viability

Lunch

Agile for Architects –
Part 1

Exercise 7 and Review

Agile for Architects –
Part 2

Summary and Close

Agenda for Virtual AT Delivery

Day 1 (8 hours)	Day 2 (6:30 hours)	Day 3 (7:45 hours)	Day 4 (4:30 hours)
Architectural Thinking Overview	Day 1 Checkpoint	Day 2 Checkpoint	Day 3 Checkpoint
What Is Architecture?	Architecture Overview	Operational Aspect Part 1	Agile for Architects – Part 1
Requirements Aspect: Functional	Exercise 2 and Review	Exercise 4 and Review	Exercise 7 and Review
Lunch	Functional Aspect	Lunch	Agile for Architects – Part 2
Requirements Aspect: Nonfunctional	Lunch	Operational Aspect Part 2	Summary and Close
Case Study Introduction	Exercise 3 and Review	Exercise 5 and Review	
Exercise 1 and Review		Validation and Viability	
Architectural Decisions and Principles			

Time for a question

What statement best describes the anti-pattern called "golden hammer?"

- A. The ultimate goal in solving any problem is to create a perfect solution, like a golden hammer.
- B. When you have a preferred solution style (a “golden hammer”), every problem begins to look the same, like a silver nail.
- C. Sometimes a solution that looks good, like a “golden hammer”, proves too unrealistic to be of any practical value.

Now, let us get started

THANK YOU
